However, that might soon change. Not because the newest update to Photoshop CC means it's no longer faster than Lightroom, but rather it's because of the combination of hardware that's available to the market right now. The growth in overall operating system capabilities will mean that it's easier to do things that used to be a chore in the past. We certainly like to hear that Lightroom is better suited to beta testers, but since it's slow to react at times, it's a bit like telling a kid that he shouldn't complain because you're locked into a Pop-Up ad and your keyboard didn't spring up and give you the ability to browse websites. It's possible, but if you're a real creative pro or someone who does large numbers of pages for your business, then you'll be using something like Photoshop for years to come. Of course, it would be silly to write an article now that's all about how amazing Lightroom is without mentioning Photoshop. Not at all. And yes, the fact that Adobe has ditched the idea of the "CC" marks something, I guess. The calendar year concept is still in place, as is the notion of "Creative Cloud" (although that's currently for subscribers only). Photoshop has moved ahead with deployments on iOS and Android and is now gaining momentum with a huge release thanks to some seriously well-worded marketing. It's quite a role to play, for sure, but that's life. And yes, you can update to the full 2015 version. That's probably why the new features are actually worth considering and not just an exercise in "hype".

- **Smart Sharpen:** There is a powerful new feature from the previous Smart Sharpen that lets you edit an original without the need to sharpen or soften the image. We have introduced a new Smart Sharpen setting in Sharpening tab. This is made possible by using HDRI in CS6. You can sharpen or soften according to your images.
- **Adjust room:** This feature provides a smart adjustment room that uses the image you are working on. For instance, if you change the intensity or the exposure of the image, Adjust room will automatically adjust the other parameters of the image to maintain the balance of the image. You can also make one-click and create a preset room that contains all the settings so you can have a fixed color temperature and create presets that can be applied any time.
- **Sepia Tone:** This replaces the Smooth Tone and the Vibrance from previous versions. The Sepia Tone can be very useful to modify the colors of your images. It uses a different set of tones and effects to give a vintage and subtle look to your images.
- **Histogram:** This will let you see exactly where the image is in Photoshop. You can pan the image for left, right, top or bottom. You can also zoom in and out on the image. It provides a better balance than the tool in previous versions, and you can now see the color information from your image.
